

Obviously, various minor changes and modifications of the present invention are possible in the light of the above teaching. It is therefore to be understood that within the scope of appended claims the invention may be practiced otherwise than as specifically described.

What is claimed is:

1. A moisture curable composition produced by blending:

100 parts by weight of a mixture (A) comprising:

- (1) a copolymer having reactive silicon groups which can be cross-linked by hydrolysis, whose molecular chain has:
 - (i) alkylacrylate and/or alkylmethacrylate monomeric units having an alkyl group with 1 to 8 carbon atoms; and
 - (ii) alkylacrylate and/or alkylmethacrylate monomeric units having an alkyl group with 10 or more carbon atoms; and

(2) an oxyalkylene polymer including reactive silicon groups which can be cross-linked by hydrolysis; and 2 parts by weight to 300 parts by weight of polymethyl methacrylate powder (B) having a grain diameter ranging from 0.01 μm to 300 μm .

2. A moisture curable composition according to claim 1, wherein said mixture (A) has a refractive index mated with a refractive index of said polymethyl methacrylate powder (B).

3. A moisture curable composition according to claim 1 or 2, wherein said mixture (A) includes at least one polymer including silyl groups.

4. A moisture curable composition according to claim 3, wherein said polymer is an acrylic polymer including silyl groups.
